ABSTRACT

Ophiocordyceps sinensis (Os) are known to have the effects on anti-inflammatory, anti-oxidation, anti-tumor, anti-fatigue. There were many health supplements in the market. The Os fermentation preparation was subjected to the safety assessment on mammals. This study was based on the specifications of safety assessment in order to test the acute toxicity and sub-acute toxicity by oral administration of Os in Wistar rats.

Keywords: Ophiocordyceps sinensis, acute toxicity, sub-acute toxicity
