SOW Nature Education, Sarawak, Malaysia is a social enterprise established by the Society of Wildness, Sarawak (SOW). For the past decade, SOW Sarawak is committed to improving the ecological awareness of conservation of people in Sarawak through activities and lectures. As more and more rainforest has been clear for timber and oil palm plantation, local tribe conservation for rainforest and traditional culture should be taking act as soon as possible. After a successful work at Batang Wulu Ai, a small Penan village near Batang Ai National Park, Sarawak, where had been announced as a community conservation area, we started the second project in 2013 in Long Lellang, a village with Penan and Kelabit aboriginal tribes near Pulong Tao National Park, Sarawak. The forest there is a traditional hunting and planting area for these tribes. With help from HOSCAP Borneo, many mammals and birds had been recorded, including some endangered species, but still lots of plants and invertebrates need to be recorded. Till now, 150 local and international tourists has visit this place by joining eco-tours hold by SOW Nature Education. Villagers also joining as partner and share the most part of economic benefit from the visitors. The project is going on, villagers want to keep their forest, and we like to share our experiences and introduce our partners in this remote place. We hope our audience will be able to visit the Rainforest School in the future.
